During sequence assembly data is compared from overlapping clones.

During sequence as found these are annotated as variations

Where differences are found these are annotated as variations

variation annotation may not be found in the sequence submission

variation annotation may not be found in the sequence submission

variation annotation may not be found in the sequence submission

variation annotation may not be found in the sequence submission

variation annotation may not be found in the sequence only a small overlapping clone, as we submit sequences with

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Birren, B., Linton, L., Nusbaum, C. and Lander, E. CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the

unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 18-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well sulted for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID 3265; 71pp + CD-ROM; English.

mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO200175067-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 biodiversity

                                                ប្តស្តប្តស្ត្រស្ត
                                                                                                       per primers AAZ36159-60 were used to amplify a cancer associated antigen concer designated XCC-3. The specification also describes a cancer associated antigen designated CT7. The CT7 polymucleotide was isolated associated antigen designated CT7. The CT7 polymucleotide was isolated from SK-MEL-37 melanoma cells. The polymetide has some homology with from SK-MEL-10, imited to about 210 carboxy terminal amino acids. The amino cerminal of the protein has a repetitive pattern, with repeats rich in terminal of the protein has a repetitive pattern, with repeats rich in the peptide given in AAY43877. The CT7 polymetide can be processed to the peptides which provoke lysis by cytolytic T cells. The polymucleotides peptides which provoke lysis by cytolytic T cells. The polymucleotides and polymetides can be used for treating a cancerus condition and antigens can be used as an immunogenic or vaccine composition with an artigens can be used as an immunogenic or vaccine composition with an actigens can be used as an immunogenic or vaccine composition with an extigens can be used as an immunogenic or vaccine composition with an extigens can be used as an immunogenic or vaccine composition with an extigens can be used as an amount or granulocyte macrophage-colony containing factor (GM-CSF).

The invention relates to isolated polymucleotide (I) and probes, complyeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome composed enem mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The composed enes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques (I) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, as useful in medical afor shopping of superating in tissue, as molecular weight markers and as function of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. Composition, forensics, gene mapping, identification of mutations capanostics, forensics, gene mapping, identification of mutations of materials of and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human cut diagnostic coding sequences of the invention.
                                                                        ö
                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                             Human; chromosome mapping; gene mapping; gene therapy; forensic;

The present sequence encodes a calcium-independent cytosolic phospholipase A2/B (cPLA2/B) enzyme. cPLA2/B is important in the release of arachidonic acid in specific tissues characterised by unique membrane phospholipids. The invention provides a process for producing such an enzyme. The enzyme as mol. wt. of 86 kD on SDS-PAGE and the presence has a crivity in a mixed micelle assay with has activity in a mixed micelle assay with lass activity in a mixed micelle assay with useful for screening anti-inflammatory agents mediated by the arachidonic acid cascade, for treating, e.g. rheumatoid arthritis
Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA was prepared from RNA isolated from CHO-DUX cells. The CDNA may be ligated into predigested lambda phage ZAPI/EcoRI vector and packaged into phage particles. The CDNA library was screened using oligonucleotide probes based on peptide sequences of calcium-perably linked to an expression control sequence such as pWT2 or PED expression vectors in order to produce the phospholipase enzyme recombinantly. Host cells include animal cells, insect cells, eukaryotes, prokaryotes, etc. The sequence may also be expressed in transgenic animals (e.g. milk of transgenic cow). The encoded protein is used to screen for agents which inhibit phospholipase activity for use as antiinflammatory agents.

This protein can be used for screening unknown compounds for anti-inflammatory activity mediated by the arachidonic acid cascade.

The present sequence represents an alternative form of a cancer associated antigen gene designated KOC-3. The specification also describes a cancer associated antigen designated CT7. The CT7. The CT7 colphyptide has some homology with MAGE-10, limited to about 210 carboxy terminal anno acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and lencine, and an almost invariable core of the peptide given in AAX43877. The CT7 colphyptide can be processed to peptides which provoke lysis by cyclytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and screening for or disgnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic conditions. The cancer associated antigens can be used as an immunogenic creation ecomposition with an adjuvant, e.g. a cytokine, a saponin, or cycle macrophage-colony stimulating factor (GM-CSF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           designated KCC-3. The specification also describes a cancer associated antigen designated CT7. The CT7 polynucleotide was isolated from antigen designated CT7. The CT7 polynucleotide was isolated from SK-MEL-37 melanoma cells. The polypeptide has some homology with terminal of the protein has a repetitive pattern, with repeats rich in the peptide given in AAY43877. The CT7 polypeptide core of peptides given in AAY43877. The CT7 polypeptide core of peptides which provoke lysis by cytolytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and accepting for or diagnosting cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony etimulating factor (GM-CSF).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polymucleotide (I) and polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The chair control of the control of the chair control of the chair chair control of the chair chair control of (II) is useful in gene therapy techniques (II). It is useful to generating antibodies against it, detecting or control of (II) and its binding partners are useful in medical a food supplement. (II) and its binding partners are useful in medical contents involving aberrant protein expression or biological activity. (I) and polymeptide and polymolectide sequences have applications in the polypeptide and polymolectide sequences have applications in content protein content traits to assess biodiversity and to produce other types of data and products dependent on DNR and cannot content types of data and products dependent on DNR and diagnostic coding sequences of the invention.

Content of produce data for this patent did not appear in the printed of the chair of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content o

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -

Claim 1; SEQ ID No 329; 980pp; English.

The invention relates to isolated nucleic acid molecules and their chocded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliotate a medical condition in e.g. humans, mice, crabbits, goats, horses, cats, dogs, chickens or sheep. They to a pathological condition. Antibodies to the proteins can also to a pathological condition. Antibodies to the proteins can also condition. Antibodies to the proteins can also diagnostic immunoassays e.g. radiolumnoassays or enzyme linked immunoassays [ELISA]. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac of the polypeptides and fungi c.g. disorders listed in the specification, and many other disorders listed in the specification, end many other c.c. transplantation, for supporting cell culture of primary tissues, to cream a food additive or preservative to increase storage c.c. regenerate tissues and in chemotaxis. The polypeptides can also be used c.g. a food additive or preservative to increase or decrease storage c.g. as food additive or preservative to increase or decrease storage c.g. minerals, cofactors and other nutritional components. The present

The present sequence represents a specifically claimed partial nucleic caid sequence encoding human RAD54 (hRAD54). A method for analysing a sample for mutation of DNA encoding hRAD54 has been developed using a sample for mutation of DNA encoding hRAD54 has been developed using a complete that the last 15 and no more than 30 consecutive bases of the DNA sequence encoding hRAD54. hRAD54 is a gene thought to be present in tumours that display allelic imbalance at 1p32, the chromosomal band in the intended as one of four minimal regions of chromosome 1 deletion in dentified as one of four minimal regions of chromosome 1 deletion in alia, that have been identified as novel hRAD54 by homology between the alia, that have been identified as novel hRAD54 by homology between the such as yeast RAD54. hRAD54 proteins are used in the treatment of such as yeast RAD54. hRAD54 proteins are used in the treatment of sundromes and X-linked mental retardation with alpha-thalassaemia syndrome and breast cancer. hRAD54 polynucleotides are also useful for despecially useful for diagnosis of disease or susceptibility to diseases. hRAD54 polynucleotides are also useful for diseases. hRAD54 polynucleotides are also useful for diseases or susceptibility to diseases. PRAD54 polynucleotide, proteins, agonists and antagonists which are broteins are useful in gene therapy.
                                                                                                                               Human; RAD54; hRAD54; cancer; xeroderma pigmentosum; Bloom syndrome; Werner's syndrome; ATR-X; diagnosis; detection; SNF2 superfamily; X-linked mental retardation with alpha-thalassemia syndrome; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human hRAD54 DNA and polypeptide - and agonists, antibodies, antagonists, etc.

This invention describes novel nucleic acids (I; designated LOBO (long Dones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. proteins of the invention of the skull and have osteopathic activity. The nucleic acid molecules, proteins and antibodies can be used in diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods and nucleic acid molecules, etc. are useful for production of transgenic animals, especially a transgenic animals, especially a transgenic acidonder especially a transgenic encodes a sasociated with bone development, e.g. spondyloepiphysal dysplasia and achondroplasia. This sequence encodes a human LOBO protein described in the method of the invention.
                                                                                    osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     colon cancer; colon cancer antigen; diagnosis; detection;
                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding proteins which influence bone development, useful for treating and studying bone disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

XX Nucleic acids encoding 4277 human colon cancer-associated polypeptides, XX VAH32943 to AAH37195 and AAG73514 to AAG77708 represent human colon cancer-associated mulciples acid molecules (N) and proteins (P), Where Cancer-associated mulciples acid molecules (N) and proteins (P), Where the proteins are collectively known as colon cancer antigens. The colon therapy and vaccine production. N and P may be used in the prevention, classociated with decreased expression by rectifying mutations or deletions contacted with decreased expression by rectifying mutations or deletions in an patient spenome that affect the activity of P by expressing CC and treatment of diseases associated with inappropriate P associated with honored activity of P by expressing CC and treatment of colorectal carcinomas and cancer-associated PS of the proteins or the supplement the patients of produce the colon cancer-associated PS of the proteins or the supplement the patients on Production of PC and treatment of colorectal carcinomas and cancer-associated PS of the activity of P by expressing and AAB7789 represent sequences used in the exemplification of the CC N Bagges 66 to 682 and page 7035 of the sequence are present for XX SEC ID NO:1027 to 1052, 7921 and 7922.

GENERAL INCOLLES.
SIMON
APPLICANT: Jones, Simon
APPLICANT: Tang, Jim
TITLE OF INVENTION: Calcium Independent Phospholipase A2/B
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genetics Institute, Inc.
STREET: 87 CambridgePark Drive
Sequence 1, Application US/0855568B
Patent No. 5976854
GENERAL INFORMATION:

Sequence 8, Application US/09061709B
Sequence 8, Application US/09061709B
Patent No. 6297364
GENERAL INFORMATION
APPLICANT: Chen, Yao-Tseng
APPLICANT: Tsang, Solam
APPLICANT: Tsang, Solam
APPLICANT: Stocker, Elisabeth
APPLICANT: Stocker, Elisabeth
APPLICANT: Much, Alexander
APPLICANT: Old, Lloyd J.
TITLE OF INVENTION: Isolated Nucleic Acid Molecules Encoding Cancer Associated
TITLE OF INVENTION: Isolated Nucleic Acid Molecules Thereof
TITLE OF INVENTION: Isolated Nucleic And Uses Thereof
CURRENT APPLICATION NUMBER: US/09/061,709B
CURRENT FILING DATE: 1998-04-17
MURBER OF SEQ ID NOS: 8
SEQ ID NO 8
LENGTH: 3283
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-061-709-6

i Sequence 6, Application US/09061709B

i Patent No. 6297364

i GENERAL INFORMATION:

APPLICANT: Chen, Yao-Tseng

APPLICANT: Tsang, Ali

APPLICANT: Tsang, Solam

APPLICANT: Tsang, Solam

APPLICANT: Tsang, Solam

APPLICANT: Tsang, Solam

APPLICANT: Tsang, Solam

APPLICANT: Jager, Elke

APPLICANT: Jager, Elke

APPLICANT: Original Antion

TILLE OF INVENTION: Isolated Nucleic Acid Molecules Encoding Cancer Associated

TILLE OF INVENTION: Antigen, The Antigens Per Se, And Uses Thereof

CURRENT PILLING DATE: 1998-04-17

                                                                                                                                                       Sequence 2, Application US/08916745
Patent No. 5840516
GENERAL INFORMATION:
APPLICANT: Arriza, Jeffrey L
TITLE OF INVENTION: Amino Acid Transporters and Uses
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSE: Allegretti & Witcoff, Ltd.
STREET: 10 South Wacker Drive, Suite 3000
                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/916,745

FILING DATE: 19-AUG-1997

CLASSIFICATION NUMBER: US 08/140,729

FILING APPLICATION NUMBER: US 08/140,729

FILING DATE: 20-CC-1993

WESULT IN APPLICATION US/09927180

Sequence 1, Application US/09927180

Patent No. US20020106364A1

GENERAL INFORMATION: Calcium Independent Phospholipase A2/B

INTIE OF INVENTION: Calcium Independent Phospholipase A2/B

INTRESPONDENCE: 25

CORRESPONDENCE: 25

COUNTRY: US.A.

ZIP: 02140

COUNTRY: US.A.

ZIP: 02140

COMPUTER: IBM PC COMPATIBLE

CONPUTER: IBM PC COMPATIBLE

COMPUTER: PatentIn Release #1.0, Version #1.25 (EPO)

MEDIUM TYPE: PatentIn Release #1.0, Version #1.25 (EPO)

CURRENT APPLICATION NUMBER: 09/519,223

FILING DATE: 09-A49-Z001

CRASTIFICATION NUMBER: 09/519,223

APPLICATION NUMBER: 09/519,223

APPLICATION NUMBER: 09/519,223

APPLICATION NUMBER: 09/519

REGISTRATION FOR SEQ ID NO: 1:

/mote-forgan: placenta normal; Vector: puc18; Site_1: Smal; Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse Ranscription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Par: +55-11-2704922

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
